

# GREENHOUSE GAS EMISSIONS IN CZECHIA BY SECTORS

Czechia's total emissions in 2018

\*CO<sub>2</sub>eq: In energy, transport and other sectors where fuel combustion is essential, these are direct CO<sub>2</sub> emissions. In agriculture and waste management, these are mainly emissions of methane (CH<sub>4</sub>) and nitrous oxide (N<sub>2</sub>O) converted to the amount of CO<sub>2</sub> emissions, which would have the same warming effect.
